Southern California Gas Company, Gas Transmission Department, has received your request for pipeline locations within the general area of your proposed project. The Gas Company operates and maintains **(20)**-inch high pressure natural gas lines **(800)** within the limits of your construction project. Attached are copies of our pipeline Strip Map sheets **(75-52, 80-52)** which shows the location of our pipelines. While we cannot guarantee the accuracy of these maps they are included to assist you in your planning and design.

One design parameter The Gas Company requires is that:

- **Consideration be given to the safety of our pipeline during the design and construction stages.**
- **Power-operated or power-driven excavation or grading shall not be allowed closer than two feet from any unexposed portion of pipeline or valve.**
- **A representative of The Gas Company must observe the excavation, when working within 10' of our facilities, to insure protection and to record pertinent data necessary for our operations.**

Upon request, at least two (2) working days prior to the start of construction, we will locate and mark our active underground facilities for the contractor at no cost. Please call Underground Service Alert (USA) at (800) 422-4133.

Arrangements for someone to stand-by and observe can be made by calling **(661) 763-2825** two working days prior to the start of construction. We would appreciate it if you would place a note on your plans to that effect.

**Re: Zone Change for 184 Unit Apartment Complex
Castle Way/ 1900-1/2 Avenue - Lemoore**

We will also require "final" grading plans and construction profiles prior to the start of construction.

Within the limits of your proposed construction, if you have not already done so, please contact the **Northern Distribution Region** of The Gas Company for information on their pipelines. You can contact them at **(559) 701-3228** and they will furnish you with any information you may require.

If a conflict is identified and can only be resolved by the relocation of our facilities, please be advised that the projected timetable for the completion of this relocation is one year. This includes planning, design, material procurement, cathodic protection, permits, environmental issues and construction.

Please refer to our Document Control Plan File # **113-12-800** and any correspondence directed to this office, in connection with this project. If you have further questions or require additional assistance, please contact **Carlos Gaeta (Carlos Gaeta@semprautilities.com)** at **(818) 701-3225**.

Sincerely,

Rosalyn Squires
Pipeline Planning Assistant
Transmission Department
